

FALL PREVENTION PROGRAM REBOOT

This comprehensive 6-week series will provide the LTC/AL team with detailed fall management program components to effectively reduce fall risk, occurrences and possible fall-related injuries. Topics will include QAPI systems to drive improved safety, keys to better fall risk assessments, insights into effective Root Cause Analysis, intervention selection that target individual resident risk factors, developing comprehensive fall management care plans, & elevating staff engagement in fall prevention efforts.

Target Audience

Nursing Leadership, Nursing Home Administrators, Department Heads, Owners/Operators, QAPI team, IDT Fall Investigation Members, Therapy, Restorative Nurses, Risk Management

CEUs

One (1) contact hour each session;
NAB approved through Proactive LTC Consulting.

Presented By:

Janine Lehman, RN, RAC-CT, CLNC
Director of Clinical and Legal Nurse Consulting

Liz Wheeler, BSN, RN, CHPN, IPCO, QCP, CDP
Clinical Consultant

June 17 - Considering all the Evidence: Assessing Fall Risk Critically

Explore how clinical changes, medication, environment, and systems of care interact to increase fall risk, and how gaps between assessment, care planning, and implementation contribute to adverse outcomes.

June 24 - Getting to the “Root” of the Fall with Root Cause Analysis

Effective fall management interventions cannot be implemented if the root cause of the fall has not been identified. This session will focus on completion of a detailed root cause analysis that will guide the facility in determining the underlying cause of falls.

July 1 - Addressing Fall Root Causes with Targeted Interventions

Falls are a frequent challenge in skilled nursing settings. This presentation focuses on moving beyond surface-level fall reviews to meaningful root cause analysis and effective resident-centered interventions.

July 8 - Engaging the IDT Troops in Fall Management

This webinar will identify strategies for assigning IDT roles/duties for fall management. Sample tools will be reviewed to assist the team members with their assigned roles, as well as insights for conducting IDT meetings for successful identification, implementation and monitoring of fall management interventions.

July 15 - Care Planning Strategies for Achieving Success

Fall Management Interventions cannot be effective if they are not addressed on the care plan, implemented consistently, and monitored/revised as needed. This webinar will focus on successful care plan strategies for fall management.

July 22 - QAPI Tactics for Sustaining Positive Outcomes

This presentation examines how an effective QAPI program can be used to reduce fall risk, prevent repeat falls, and improve resident outcomes through data-driven decision making.
